## ANSWERS FOR RAILWAY APPLICATIONS

ARTECHE auxiliary relays guarantee the best features and complete security even in the hardest working environment.

The FF range has been designed to fulfil the most demanding requirements in the railway industry in regards to low duty loads, fire and smoke, etc.

Their design, durability and quality make them suitable for high responsibility controls in the railway sector, highlighting:

### ROLLING STOCK:

- > Boarding doors locking.
- > Brake circuit command.
- > Security loop.
- > Pantograph control.
- > Lighting and air conditioned systems operation.
- > Traction system.
- > Brake systems.

# INTERLOCKING AND SIGNALLING:

Interface between infrastructure and rolling stock:

- > ASFA systems.
- > RTMC systems.
- > RTMS systems.
- > CBTC systems.
- > ETCS systems.
- > ATO/ATP/ATS/APR... systems

## GENERAL CHARACTERISTICS

The main features of ARTECHE's auxiliary relays are the following:

- Security contacts, WELD NO TRANSFER (EN 50205 Standard).
- > NO WELD contacts (NF F 70-031 Standard).
- > Capable to withstand vibrations and seismic conditions (EN 61373 Standard).
- > Capable to operate under low duty loads, activate digital inputs, and operate without any load.
- Security applications: they can be used in applications up to SIL 4.
- > Wide range of auxiliary voltage levels (Vdc and Vac).
- > Sturdy design.
- > Self-cleaning contacts.
- > Designed to allow continuous operation even in high ambient temperature, within the whole voltage range.
- > High level of electrical insulation between input and output circuits.
- > High degree of protection (IP40), with transparent cover, making them suitable for use in salty and tropical atmospheres.
- > Capable to work under ambients with relative humidity around 100%.
- > Simplicity of installation (plug-in relays in a wide range of sockets with different installation configurations).
- > No need of maintenance after installation.

In addition, the different number of alternatives that are offered when the equipment is selected, both technically (increase of the breaking capacity by serial contacts, possibility of adding different options to the relay) and in the assembly method (front, rear or flush mounted sockets, with screws or fastons) must be considered.

## **TECHNICAL STANDARDS**

### RAILWAY APPLICABLE STANDARDS

- > EN 60077 Series. Rolling stock equipment.
- Part 1: General conditions in service and general terms.
- Part 2: Electrotechnical components.
- > EN 50155 (IEC 60571 equivalent). Railway applications Electronic equipment used on rolling stock.
- > IEC 61373. Railway applications Shock and vibration tests.
- > NF F 16-101 y NF F 16-102. Rolling stock fire behaviour.
- > EN 45545-2. Railway applications Fire behavior of materials and components.
- RIA 12. General specification for protection of traction and rolling stock electronic equipment from transients and surges in DC control systems.
- > EN 50121-3-2:2006. Electromagnetic compatibility.
- > EN 50205. Relays with forcibly mechanically guided contacts. WELD NO TRANSFER
- > NF F 70-031. Contact weld resistance tests. NO WELD CONTACTS
- > UIC 736R:2004. Signalling relays.

### GENERAL STANDARDS

In addition to the specific applicable standards, ARTECHE auxiliary relays are designed based on the fulfilment of the following standards:

- > IEC 61810: Electromechanical all-or-nothing relays.
- > IEC 60255: Electrical relays. Measuring relays and protection equipment.
- > IEC 61812: Specified time relays for industrial use.
- > IEC 60947: Low-voltage switchgear and controlgear.
- > IEC 61000: Electromagnetic compatibility.

**UL Recognized Component Marks for USA and Canada:** The combined UL signs for the USA and Canada are recognized by the authorities of both countries. All auxiliary relays identified with this mark meet the requirements of both countries.

## RANGE OF PRODUCTS

### INSTANTANEOUS RELAYS

Thanks to an exhaustive control process, the FF range can assure a correct performance of the contacts with low duty loads or even with no load.

These instantaneous relays can be manufactured with different options: front led, mechanical indication of the contacts position, trip flag and push to test button (see model selection table in page 27).

#### Instantaneous relays

ARTECHE's auxiliary relays are designed to work properly under frequent vibration and shock applications, as in the case of railway sector.

They comply with the extended voltage range (+25 / -30 %).

The sturdy design of our equipment, with a higher appropriate pressure between contacts, allows them to withstand vibrations without penalizing the good performance of the relays.

#### Instantaneous relays with coil overvoltage protection

In applications with overvoltage, where drop-out time is not important, it is recommended to use a diode. Otherwise, a varistor is more suitable.

These elements are aimed to discharge the energy of the coil when the relay is no longer energized.

These relays are suitable when the customer wishes to protect the contact of the equipment which commands the operation of our relay, providing a longer durability of the whole protection and control system.

### TIMERS

Relays in which the operation of the contacts is subject to a timing set in the relay. This timing can be on pick up, drop out, cyclic ...with high accuracy and a wide range, from milliseconds to several hours, all of them available in the same relay.

When timing is on drop out or cyclic, an auxiliary supply is needed.

There is the possibility of having different voltages for supply and command of the timing, by choosing the option "independent command" (see model selection table in page 29).

### LATCHING RELAYS

ARTECHE latching relays have two stable positions for the output contacts. Depending on which coil is fed, contacts will change from one position to the other. The ARTECHE latching relays only have consumption during the change from one position to the other, having therefore no consumption in permanence.

### CONTACTORS

Their design is based on the instantaneous relays, but incorporating magnetic blow-out and ceramic shielding to protect the plastic materials from the electric arc created when opening high loads. This configuration allows them to open up to 15 Amps in 125 Vdc, 40ms inductive circuits.

### IMPULSE RELAYS

Similar to latching relay with a single input. Each impulse in the input makes the contact position change. An auxiliary supply is needed.

Auxiliary relays | Railway sector

# BREAKING CAPACITY

With devices operating worldwide, also heavy industries like oil & gas sector trust in our relays.

The breaking capacity is a critical parameter on the design and the application of the relay. Its mechanical life could be considerably reduced, depending on the value of the load (especially with heavy duty loads), the number of operations and the environmental conditions in which the relay is operating.

In any configuration, ARTECHE's auxiliary relays have high breaking capacity values. These limits are shown in the table below, in terms of power and current values. In all cases, these relays guarantee the correct performance during 50,000 operations.

Likewise, the values shown in the following charts have been obtained in standard conditions in the laboratory, and they could be different in real conditions. In any case, the possibility of connecting serial contacts or a bigger distance between contacts makes these values to be considerably increased.

## INSTANTANEOUS, LATCHING, TIMERS AND PULSE RELAYS

### 24 Vdc voltage Different load configurations.

		0 1	ns	20	ms	40	ms
Vdc	Contact configuration	P(W)	I(A)	P(W)	I(A)	P(W)	I(A)
	Distance between contacts = 1,8 mm	500	20,83	370	15,42	250	10,42
24	Distance between contacts = 1,2 mm	450	18,75	300	12,50	210	8,75

### 110 Vdc voltage Different load configurations.

		0	ns	20	ms	40	ms
Vdc	Contact configuration	P(W)	I(A)	P(W)	I(A)	P(W)	I(A)
	Distance between contacts = 1,8 mm	170	1,55	140	1,27	90	0,82
	Distance between contacts = 1,2 mm	125	1,14	100	0,91	65	0,59
110	2 contacts in series. Distance between contacts = 1,8 mm	1.360	12,36	1.106	10,05	730	6,63
	2 contacts in series. Distance between contacts = 1,2 mm	874	7,95	742	6,74	482	4,38

### CONTACTORS

### 110 Vdc Voltage

### HOW TO SELECT THE CURVE OF MY RELAY

These charts show the breaking capacity values, either for resistive and highly inductive loads, in three voltage values of reference (ask for other voltage values). The charts show two different curves:

- > Pink Curve: Breaking capacity of the relays with distance between contacts = 1.8 mm.
- > Blue Curve: Breaking capacity of the relays with distance between contacts = 1.2 mm.

The distance between contacts is shown in the tables of technical data.

## HOW THE BREAKING CAPACITY CAN BE INCREASED

Although ARTECHE auxiliary relays are power relays, designed to have a high breaking capacity, there are applications where the loads are so high that it is necessary to even increase the breaking capacity, keeping the reliability of the contacts of the auxiliary relays.

Thus, ARTECHE relays offer the possibility of connecting 2 or more contacts in series giving an important increase of breaking capacity, guaranteeing the right performance during a high number of operations.

The breaking capacity obtained is shown in the breaking capacity charts with yellow and light blue colours.

# PICK-UP VOLTAGE/RELEASE VOLTAGE-TEMPERATURE CHARTS

Auxiliary Relays | Railway Sector

## INSTANTANEOUS RELAYS AND CONTACTORS

Variability of operative voltage range against temperature for the instantaneous auxiliary relays.

### INSTANTANEOUS RELAYS WITH AND WITHOUT COIL OVERVOLTAGE PROTECTION AND CONTACTORS

## Operative range against ambient temperature.

Upper limit of the pick-up voltage
Lower limit of the Pick-up voltage
Lower limit of the Drop-out voltage
Operative range of the coil voltage

#### Temperature (°C)

## LATCHING RELAYS

The following curve shows the variability of operative voltage range against temperature for the Latching relays.

## GENERAL PURPOSE LATCHING RELAYS AND LATCHING RELAYS WITH COIL OVERVOLTAGE PROTECTION

Operative range against ambient temperature.

## TIME-LAG RELAYS AND IMPULSE RELAY

The following curve shows the variability of operative voltage range against temperature for the time-lag relays.

### TIME-LAG RELAYS AND IMPULSE RELAY

### DIMENSIONS OF THE RELAYS

> Dimensions: A x B x C

## **RETAINING CLIPS**

The use of retaining clips should be mandatory on rolling stocks to prevent the relay to get out of its socket by vibration.

The best choice thereof depends on the combination of relay and socket.
